

AEMC's Newest PowerPad® Model 8335 Three-Phase Power Quality Analyzer

Technical Diagnostic Services is pleased to announce AEMC's Newest PowerPad® Model 8335 Three-Phase Power Quality Analyzer.

The PowerPad® Model 8335 is a three-phase power quality analyzer that is easy-to-use, compact and shock-resistant. It is intended for technicians and engineers to measure and carry out diagnostic work and power quality work on one, two or three phase low voltage networks.

The PowerPad®'s 2GB of memory is conveniently partitioned to let you store four different types of data, synchronized or independent of each other. You can store up to 50 screen snapshots, up to 300 captured transients that contain four cycles for each active input, and 10000 alarm events from up to 40 different parameters. You can also record trend data for days, weeks or even months.

Applications include:

- Verification of power distribution circuits
- Measurement and recording of power system quality (kW, VA, VAR)
- Energy metering (kVAh, VARh, kWh)
- In plant troubleshooting of power distribution panels and individual machinery
- Monitor pad mount transformers
- Determine harmonic problems originating from source or load
- Monitor phase unbalances
- Determine transformer K-Factor

To see what the AEMC 8335 can offer you, please see the [AEMC 8335 specification sheet](#).

If you would like to rent OR purchase the AEMC 8335 to benefit your company, please give TDS a call or visit our

AEMC 83335 Specs
at a Glance

Sampling
Frequency:
256 samples/cycles

Data Storage:
2GB SD Card

Voltage (TMRS):
Phase-to-Phase: 1000V
**Phase-to-Neutral:
1000V**

Frequency (Hz):
40 to 69Hz
