New BetaLOG™ Data Logging

Technical Diagnostic Services (TDS) is pleased to announce the new BetaLOG™ data logging.

BetaLOG™ high performance data logging works with Martel's BetaGauge PI/PIR digital test gauges to accurately capture and upload pressure data in either field configured

or computer downloaded modes. A unique feature of the BetaLOG/BetaGauge combination is the ability to simultaneously record ambient temperature along with pressure.

The user can configure the type of data, number of data points, recording mode and much more. Uploaded data is stored in standard spreadsheet file formats. Further, gauges are not tied to a particular software installation. Any BetaLOG software can turn on and configure data logging in any compatible BetaGauge. In other words, it costs no more to data log with 10 gauges than with a single gauge.
